Position Description

Position: Associate IT Support Engineer

Department: IT

Reports to: Director of Finance and Business Information

Direct Reports: -

Position purpose:

The Junior IT Support Engineer will be responsible for providing technical assistance and support to end-users within the organization. The primary objective of this role is to ensure the smooth operation of computer systems, software, and hardware, and to address any issues or concerns raised by users. The Junior IT Support Engineer will work under the guidance of senior IT personnel to deliver effective and timely support services.

Key responsibilities:

- User Support: Provide technical assistance to end-users through various channels, such as in-person, email, or phone, to resolve software, hardware, and network-related issues.
- System Deployment: Assist in the installation, configuration, and maintenance of computer systems, including servers, workstations, and networking equipment.
- Troubleshooting: Diagnose and resolve technical problems reported by users, including software malfunction, network connectivity issues, and hardware failures. Escalate complex issues to senior IT team member when necessary.
- System Maintenance: Assist in the installation, configuration, and maintenance of computer systems, including operating systems, software applications, and peripheral devices. Perform routine system updates and ensure security protocols are up to date.
- System Deployment: Assist in the installation, configuration, and maintenance of computer systems, including servers, workstations, and networking equipment.
- System Administration: Perform routine administrative tasks such as user account management, system monitoring, and backups to ensure optimal system performance and data integrity.
- System Upgrades and Patches: Assist in planning and implementing system upgrades, updates, and patches to ensure system stability, security, and compatibility with software applications.
- Network Support: Assist in maintaining and troubleshooting network infrastructure, including switches, routers, and firewalls. Collaborate with network engineers to resolve network-related issues.
- Software Support: Assist to install, update, and troubleshoot software applications, ensuring they meet user requirements and comply with organizational policies.
- Remote Support: Utilize remote access tools to aid off-site users and troubleshoot issues remotely.
- Documentation: Create and maintain technical documentation, including user guides, knowledge base articles, and standard operating procedures, to aid in problem-solving and knowledge transfer.
- Asset Management: Assist in managing and tracking IT assets, including computers, peripherals, software licenses, and equipment inventory. Help maintain accurate records of hardware and software deployments.
- User Training: Conduct training sessions and workshops to educate users on basic IT functions and best practices. Assist in developing training materials and resources for end-users in conjunction with senior IT team members.
- Security: Follow security protocols and best practices to ensure data privacy and protect systems from unauthorized access. Assist in implementing security measures, such as user access controls and data backups.
- Collaborative Support: Collaborate with the IT team to address complex technical issues and contribute to the continuous improvement of IT infrastructure and services.
